

DATASHEET

CLP0412DC Open Frame Power Supply

48V_{ac} Input; 12V_{dc} Output; 450W Output Power

Description

In a small 3 x 5 inch footprint, the 12V_{dc} single-output CLP0412DC open frame power supply delivers 93 percent power efficiency and 450W output at 42°C and 1m/s airflow. With its small size, the CLP series is specifically designed to handle power challenges associated with tight space and low airflow. Offering a high 20.7W/in³ power density in a 1U high, fan-less form factor, the CLP series addresses a broad range of applications in new products from industrial

equipment and communications original equipment manufacturers (OEMs). Higher temperature operation is possible at derated output. The CLP series utilizes a unique design approach at this power level, leveraging zero voltage switching techniques. Protection features include overcurrent (OCP), overvoltage (OVP), and overtemperature (OTP)

Applications

- Industrial equipment
- Telecommunications equipment

Features

- Reverse input voltage protection
- Compact size 76.2 mm x 127 mm x 36.8 mm (3 in x 5 in x 1.45 in) with density of 20.7 W/in³
- Universal DC Input Range (36 – 75V_{DC})
- Output voltage of 12V (adjustable ±5%)
- Standby output of 5V @ 1A (standard versions)
- Maximum output current of 37.5A @ 12V_{out} (450W)
- High efficiency (93% at Full Load)
- 450W capability at 42°C and 1m/s airflow with derating at higher temperatures or lower airflows
- Capable of 320W out in sealed enclosure applications with enclosure ambient at 55°C
- Output overcurrent protection (non-latching)
- Overtemperature protection
- Output overvoltage protection
- Up to 2ms of holdup time
- Parallelable with output current sharing (option)
- Conformal coated
- Conducted EMI - meets CISPR32 (EN55032) and FCC Class B requirements
- Compliant to RoHS Directive 2011/65/EU and amended Directive (EU) 2015/863
- Compliant to REACH Directive (EC) No 1907/2006
- UL and cUL approved to UL/CSA62368-1, TUV (EN62368- 1), CE Mark (for LVD) and CB Report available
- ISO** 9001 and ISO 14001 certified manufacturing facilities

Technical Specifications

Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. Functional operation of the device is not implied at these or any other conditions over those given in the operations sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect the device reliability.

Parameter	Device	Min	Max	Unit
Input Voltage - Continuous	All	36	75	V _{dc}
Operating Ambient Temperature	All	-40	85	°C
(in sealed enclosure applications with thermally conductive pad to enclosure, P _{O,max} = 320W)	All	-40	85	°C
Storage Temperature	All	-40	85	°C
Humidity (non-condensing)	All	5	95	%
Altitude	All		5000	m
Isolation Voltage – Input to output	All		1000	V _{dc}

Electrical Specifications

Parameter	Device	Min	Typ	Max	Unit
Operating Input Voltage	All	36	48	75	V _{dc}
Input Current	All			15	A
Inrush Transient Current (V _{IN} = 48V _{dc} , T _{amb} = 25°C)	All			100	A Peak
Leakage Current to earth ground (V _{IN} = 48V _{dc})	All			3.5	mA
Output Voltage Setpoint	All		12		V _{dc}
Output Voltage Tolerance (due to set point, temperature variations, load and line regulation)	All	-2		2	%
Output Voltage Adjustment Range	All	11.4		12.6	V _{dc}
Output Remote Sense Range	All			250	mV _{dc}
Output Load Regulation	All			1	%V _{out}
Output Line Regulation	All			0.5	%V _{out}
Output Ripple and Noise – measured with 0.1μF ceramic capacitor in parallel with 470μF polymer capacitor ¹ Peak-to-peak (20MHz Bandwidth)	All			240	mV _{p-p}
Dynamic Load Response – 50% to 100% load transient, 1A/μs slew rate	All			5%	%
Output voltage deviation	All			500	μs
Settling Time	All				
Output Current	All	0		37.5	A _{dc}
Output Current Limit Inception	All	105		140	% I _{o,max}
Maximum Output Capacitance	All			10000	μF

¹ Output ripple specification is met over -40 to 85°C

Technical Specifications (continued)

Electrical Specifications (continued)

Parameter	Device	Min	Typ	Max	Unit
Standby Output Voltage	All		5		V _{dc}
Standby Output Current	All			1	A _{dc}
Efficiency: V _{IN} = 48V _{ac} , 20% load	All		92.0		%
50% load	All	-	94.0	-	%
100% load	All		93.0		%
Holdup Time – 100% load ² (V _{out} ≥ 10.8VDC, T _{amb} = 25°C, 450W, V _{IN} = full range)	All	2			ms

²Holdup time is reduced at cold temperatures

Isolation Specifications

Parameter	Device	Min	Max	Unit
Isolation Voltage – Input to output	All		1000	V _{dc}
– Input to ground			1000	V _{dc}
– output to ground			100	V _{dc}

General Specifications

Parameter	Device	Symbol	Typ	Unit
Calculated Reliability based on Telcordia SR-332 Issue 2: Method 1 Case 3 (V _{IN} =48V _{dc} , I _o = 30A, T _A = 40°C, airflow 200LFM, 90% confidence)	All	MTBF	1,591,287	Hours
Weight	All		355 12.52	g (oz.)

Feature Specifications

Parameter	Device	Min	Typ	Max	Unit
On/Off Signal Interface – signal referenced to GND					
Logic Low (Power Supply ON)					
Input Low Current	All			7	mA
Input Low Voltage	All			1	V
Logic High (Power Supply OFF)					
Input High Current	All			600	µA
Input Voltage	All			5.5	V
Delay from ON/OFF being enabled to start of output voltage rise	All			50	ms
Output Voltage Rise Time (from 10 to 90% of final value)	All		5		ms
Delay from Input being applied to standby output being in regulation	All		0.3		s
Delay from Input being applied to all outputs being in regulation	All		2		s
Output Overvoltage Protection	All	13.8		16	V _{dc}

Technical Specifications (continued)

Safety Considerations

The CLP0412DC embedded power supply is intended for inclusion in an end product equipment and shall be installed in compliance with the enclosure, mounting, spacing, casualty and segregation requirements of the end-use application. A suitable Electrical and Fire enclosure shall be provided and is not intended to be operated as a stand-alone product. The power supply meets Class 1, IEC62368-1, EN62368-1, with the applicable national deviations which approved by TUV and UL(Recognized Component) C-UL (Canadian Approval by UL).

Feature Descriptions

Standby Power Supply

A standby output of 5V in the CLP0412DC power supply comes up when DC input in the operating range is applied.

Remote On/Off

The CLP0412DC power supply features a TTL-compatible On/Off control input. The power supply turns ON when the On/Off input goes low, and turns OFF when the input goes high. Note that if the On/Off pin is left unconnected, the power supply main output will turn ON when DC input is present.

Output Voltage Adjustment

For all units, the output voltage can be adjusted between 11.4V and 12.6V using a potentiometer on the power supply.

Remote Sense

For all versions, the power supply has both positive and negative remote sense connections that can be connected to the positive and negative rails of the main output near the load. The power supply operates even without the remote sense connections being made.

Overcurrent Protection

To provide protection in a fault condition (output overload), the power supply is equipped with internal current-limiting circuitry and can endure current limiting continuously. At the point of current-limit inception, the unit enters hiccup mode. The power supply operates normally once the output current is brought back into its specified range.

Overvoltage Protection

Overvoltage protection is a feature of the CLP0412DC power supply that protects both the load and the power supply from an output overvoltage condition. When an overvoltage occurs, the power supply shuts down and latches off until the overvoltage condition is removed. It is necessary to recycle the input to restart the power supply when this protection is activated.

Reverse Input Voltage Protection

Reverse Input Voltage Protection is a feature of the CLP0412DC power supply that protects the power supply from damage if a reverse voltage is applied to the input.

Page 9

Overtemperature Protection (OTP)

For additional protection in a fault condition the CLP0412DC is equipped with a thermal shutdown circuit which detects excessive internal temperatures and shuts the unit down. Once the power supply goes into overtemperature shutdown, it will cool before attempting to restart. The overtemperature protection circuit will typically kick in when the unit is operated at 450W output with an ambient temperature of 53°C and 1m/s (200LFM) airflow. In a sealed enclosure OTP will depend on enclosure design and cooling.

Input Under-voltage Lockout

At input voltages below the input under-voltage lockout limit, power supply operation is disabled. The power supply will begin to operate at an input voltage above the under-voltage lockout turn-on threshold

DC OK

The CLP0412DC provides a DC OK signal that indicates when the output has come up and is in regulation. This is an open-collector type signal that goes high when the output is available and within regulation.

Power Good LED

A green LED on board the power supply illuminates when the main output voltage is at or above 10V.

Paralleling /Load Sharing

The CLP0412DC is capable of being employed in a paralleling scheme, following are some design attributes that need to be carefully considered prior to attempting a parallel operation with multiple CLP0412DC's. With the following design criteria, the CLP0412DC will load share at an accuracy of +/-5%, when the total current draw is at levels above 20% of max overall loading.

- Current share signals of each power supply to be connected.
- An external Oring function needs to be employed at the $V_{out}(+)$ signal. An ORing diode or a Mosfet & controller scheme can be used.
- The 5V Standby Return SHOULD NEVER be connected to the VOUT- (RETURN). 5V stby returns will need to be connected, the 5V stby Vout(+) leg remain separate. The 5V stby output is not designed to be paralleled, if there is a desire for these to be paralleled for load sharing, then other considerations need to be included as well. Contact your local OmniOn sales representative for more details.
- Remote sense signals should be left unconnected to enable better current sharing performance.
- During parallel operation, it is essential that the V_{out+} and V_{out-} of the paralleled power supplies always stay connected . If V_{out+} or V_{out-} of any of the power supply gets disconnected, then it is important to reconnect it back or completely remove that power supply. This is to avoid damage to the power supply with only one connection.

Technical Specifications (continued)

Thermal Considerations

The power supply can be operated in a variety of thermal environments; however enough cooling should be provided to ensure reliable operation.

Considerations include ambient temperature, airflow, power supply dissipation and the need for increased reliability. A reduction in the operating temperature of the power supply will result in increased reliability. The thermal data presented here is based on measurements taken during testing in a wind tunnel or temperature chamber.

Heat Transfer via Convection

Increased airflow through the power supply enhances the heat transfer via convection. Figure 10 shows the preferred airflow direction. Contact your OmniOn technical representative for derating information in other airflow directions.

Fig. 10. Preferred airflow direction for cooling.

Operation in a Sealed Enclosure

The CLP0412DC power supply can also be operated in a sealed enclosure or in an environment where cooling is primarily via conduction. Figure 11 shows an arrangement where thermally conductive pads are used to transfer heat from the top and bottom of the power supply into the enclosure. Under such conditions, the power supply is capable of reduced power operation as shown in Table 1.

Thermal conductivity should be 3.0 W/m-K for thermal pad application, 3.0mm thickness and 1kV+ isolation, example:

Thermal gap pad:

Thermal gap pad: <https://www.lairdtech.com/products/tputty-502>

Fig. 11. Example arrangement of the CLP0412DC for sealed enclosure applications

Technical Specifications (continued)

Assembling

- Please use metal screw to mount the unit and make sure 4 mounting holes connected to Earth well.
- In Applications where the power supply is enclosed, special attention to clearances between the supply and the enclosure should be paid. A min. 3.5mm on all sides is necessary for improved safety. For additional protection, a layer of Kapton tape, 3 mil in thickness, covering the whole surface under the supply is recommended. If a cover is used, a 3 mil Kapton Tape covering the whole cover is also recommended. Please contact your local OmniOn FAE if further information is need.
